

Myxomatosis

Myxomatosis is a highly contagious viral disease in rabbits caused by a poxvirus. EUROFINS INGENASA has developed an indirect ELISA to monitor this disease.

INgezim® Mixomatosis -17.MIX.K1

Indirect ELISA

Detection of specific antibodies to myxomatosis virus.

98% sensitivity & >99% specificity in relation to other commercial ELISA.

Presentation: 2 plates.

Streamlined workflows.
