

Eurofins Technologies Diagnostic Kits for In-House Testing Laboratories

Many food and beverage companies conduct all or part of their testing in-house. These testing operations face mounting pressure to meet new regulatory, customer standards and manage costs while ensuring quality and timely product release.

Building on the experience and scientific excellence of the Eurofins Group, Eurofins Technologies is a fast-growing, global provider of diagnostic test kits and lab consumables for the food, feed, environmental, biopharma and clinical industries.

Our in-house R&D teams have expertise in developing a wide range of assays and custom solutions. We are delighted to provide best-in-class technical support for our partners.

Eurofins Technologies offers a broad range of diagnostic kits covering:

- Allergens
- Food Pathogens
- Viruses
- GMOs
- Mycotoxins
- Veterinary Drugs Residues
- Animal Species
- Veterinary Diagnostics
- Environmental and Water Testing

Available testing methods:

- ELISA kits
- Lateral flow tests
- PCR kits
- Immunoaffinity Columns

Instruments:

- Automatic ELISA analyzer

Eurofins Technologies Solutions

Solutions for local and global manufacturers

Eurofins is able to provide comprehensive, customized and consistent solutions, both for in-house and external testing:

- Fully customizable to support your quality management strategy;
- Best-in-class technical support and expertise from the world leader in bioanalytical testing;
- Consistent product quality and customer service globally.

Eurofins Technologies Product Overview

Test Kits / Methods	ELISA	Lateral flow	PCR	IAC
