

Eurofins Technologies Veterinary Diagnostic Kits

In industrial livestock production, operating conditions are optimized to achieve the highest production output while minimizing costs. Given the high density of livestock and the production pressure, the emergence of infectious diseases is a major risk, and therefore prevention and control measures are essential.

When an infectious disease occurs, immediate actions including identifying the cause of the outbreak are important to prevent further spreading and to limit the damages.

During the recovery phase of an outbreak, an antibody detection diagnostic assay could be required to prove freedom of disease within the previously infected zone.

Different Testing Methods for all Applications

ELISA Kits

- Indirect, blocking or double antibody assays
- Many of these assays are manufactured with reagents obtained by own patented processes

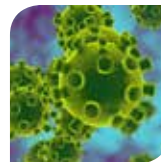

Lateral Flow Devices

- Ease of use
- Can be applied directly on the field
- High sensitivity and specificity rates

PCR Assays

- Constantly developing product line
- Covers the most common platforms

Eurofins Technologies Veterinary Diagnostic Kits

Eurofins Technologies through its subsidiary Ingenasa provides a wide range of ELISA, LFD and PCR assays to detect viral and bacterial pathologies in both farm and companion animals.

We offer the broadest catalogue of veterinary diagnostic assays which includes more than 250 products, covering 80 different infectious diseases that affect 9 different animal species. All products are manufactured under strict quality and environmental standards.

Our diagnostic kits support the animal health management with:

- Detecting and monitoring epidemiological risks;
- Supporting vaccines & treatment development;
- Controlling the quality of produced meat;
- Improving animal welfare.

Key Benefits of the Veterinary Diagnostic Kits

- Easy and reliable tests, based on high quality reagents (recombinant antigens and monoclonal antibodies)
- Wide range of infectious diseases and animal species covered
- Different presentations available for the best adaptation to the requirements of each client

Assays for Farm and Companion Animals

Veterinary diagnostic kits for farming animals: diagnosing illnesses of livestock species such as horses, cattle, pigs, sheep and goats.

Veterinary diagnostic kits for companion animals: detection of specific antibodies to different viral and fatal diseases in cats, dogs or rabbits.

Porcine

Rabbit

Multispecies

Ruminants

Feline

Equine

Canine
